

## Project Initialization and Planning Phase

|                      |                                                                     |
|----------------------|---------------------------------------------------------------------|
| <b>Date</b>          | 1 October 2026                                                      |
| <b>Team ID</b>       | SWTID-2026-3594                                                     |
| <b>Project Name</b>  | Script-Controlled ACL – Restrict Record Access Based on Field Value |
| <b>Maximum Marks</b> | 3 Marks                                                             |

### Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

#### Example:

| <b>Problem Statement (PS)</b> | <b>I am (Customer)</b>                                      | <b>I'm trying to</b>                                               | <b>But</b>                                                            | <b>Because</b>                                                                      | <b>Which makes me feel</b>                          |
|-------------------------------|-------------------------------------------------------------|--------------------------------------------------------------------|-----------------------------------------------------------------------|-------------------------------------------------------------------------------------|-----------------------------------------------------|
| PS-1                          | A ServiceNow administrator responsible for institution data | Allow only EEE branch users to view EEE student records            | Every user with table read access can see the records of all branches | Standard role-based ACLs do not evaluate the value of a record field such as Branch | Concerned about data exposure and compliance        |
| PS-2                          | An EEE branch user (role bb1)                               | Open the Institution Details list and see only my branch's records | I either see records of other branches or no records at all           | Access is not tied to the Branch field of each record                               | Frustrated and unsure what I am allowed to see      |
| PS-3                          | A security auditor reviewing the instance                   | Confirm that read, create, write and delete rights are separated   | I cannot tell which role controls which operation                     | All permissions are bundled into one broad role                                     | Confident once each operation maps to a single role |
