

Customer Journey Map

Date	1 October 2026
Team ID	SWTID-2026-3594
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Sign in & role check	Stage 2: View records	Stage 3: Create, edit & delete
Actions <i>What does the customer do?</i>	- Logs in as the EEE User - Admin assigns roles bb1 - bb4 - Opens u_institution_details.list	- Opens the Institution Details list - Reads the records shown - Compares with the admin's view	- Clicks New to add a record - Edits an existing EEE record - Deletes a record that is no longer needed
Touchpoint <i>What part of the service do they interact with?</i>	- Login page - User Administration → Roles - Application navigator	- List view of u_institution_details - Read ACL - Branch filter / data condition	- New button and form - Write ACL (bb3) - Delete ACL (bb4) and Create ACL (bb2)
Customer Thought <i>What is the customer thinking?</i>	"Do I have the right roles?" "Will I see only my branch?"	"Why are other branches hidden?" "Is this the complete EEE list?"	"Can I really change this record?" "Is deleting safe?"
Customer Feeling <i>What is the customer feeling?</i>	- Curious - Slightly uncertain	- Reassured about privacy - Satisfied with access	- Confident - In control of permitted actions
Process Ownership <i>Who is in the lead on this?</i>	ServiceNow Administrator	ServiceNow platform (ACL engine) with the EEE User	EEE User, supervised by the Administrator
Opportunities <i>How can we improve this stage?</i>	- Use descriptive role names instead of bb1 - bb4 - Automate role assignment through groups	- Show a short message explaining hidden records - Add a saved list filter for Branch	- Add audit logging for edits and deletes - Add field-level ACLs for sensitive fields
