

Solution Architecture

Date	1 October 2026
Team ID	SWTID-2026-3594
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Solution Architecture Diagram:

Provide a high-level visual representation of your solution's architecture. Use the structural layout below as a template to map out your Presentation Layer, Application Layer, and Data Layer. Fill in the specific technologies and components for your project directly into the boxes to create your architectural diagram.

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Where the EEE User and Admin open the Institution Details list and form and see the result of the ACLs (visible records, New button).	ServiceNow UI (list and form views), Service Portal
Platform Gateway	Authenticates the user, builds the session with the user's roles, and supports admin impersonation for testing.	ServiceNow login and impersonation

Component Name	Description / Role in Architecture	Technologies Used
Auth & Role Service	Stores users and the custom roles bb1 - bb4 that decide who may read, create, write or delete.	User Administration → Users and Roles
Core Logic (ACL Engine)	Evaluates the matching ACL on every operation: role check, data condition (Branch is EEE) and the ACL script with the admin bypass.	System Security → Access Control (ACL), server-side JavaScript
Database	Holds the custom table u_institution_details with Student Roll Number, Student Name, Faculty Name, Branch, Email, Phone Number and Description.	ServiceNow platform database, System Definition → Tables
