| <b>Maximum Marks</b> | 5 Marks                                                             |

### Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

#### Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

### Solution Summary

| Field                         | Details                                                                                                                                                                                                                                                                                                                                                                                                    |

| Programming Language(s)       | JavaScript (ServiceNow server-side scripting)                                                                                                                                                                                                                                                                                                                                                              |
| Framework(s) Used             | ServiceNow platform: Users, Roles, Tables and Access Control Lists (ACL)                                                                                                                                                                                                                                                                                                                                   |
| Key Features Implemented      | <ul style="list-style-type: none"> <li>• EEE User and custom roles bb1, bb2, bb3, bb4</li> <li>• Custom table Institution Details (u_institution_details) with seven fields</li> <li>• Script-controlled READ ACL (Branch is EEE, role bb1, admin bypass)</li> <li>• CREATE ACL (bb2), WRITE ACL (bb3) and DELETE ACL (bb4)</li> <li>• Verification by impersonating the EEE User and the Admin</li> </ul> |
| Pending / Incomplete Features | None for the lab scope. Optional extension: verify the ACLs in a Service Portal page.                                                                                                                                                                                                                                                                                                                      |
| Setup / Run Instructions      | <ul style="list-style-type: none"> <li>• Log in to the ServiceNow instance as admin.</li> <li>• Create the EEE User, roles bb1 - bb4 and the table u_institution_details.</li> <li>• Elevate the security_admin role and create the four ACLs.</li> <li>• Impersonate the EEE User and open u_institution_details.list to verify.</li> </ul>                                                               |

### Code Quality Checklist

| S.No | Criteria                                               | Status (Yes / No) |
|------|--------------------------------------------------------|-------------------|
| 1    | Code is modular and organized into functions / classes | Yes               |
| 2    | Meaningful variable and function names are used        | Yes               |
| 3    | Code includes comments / documentation where necessary | Yes               |

| S.No | Criteria                                              | Status (Yes / No)      |
|------|-------------------------------------------------------|------------------------|
| 4    | Error handling is implemented for critical operations | Yes                    |
| 5    | The application runs without critical errors          | Yes                    |
| 6    | Code is committed to a version control repository     | No (add after pushing) |

### Additional Notes / Comments:

The Read ACL script (Advanced = true) used on u\_institution\_details:

```
(function () {
    // Allow admin users full access
    if (gs.hasRole('admin')) {
        return true;
    }

    // Allow only EEE branch users to see EEE records
    if (gs.hasRole('bb1')){
        return true;
    }

    // Deny access for all others
    return false;
})();
```

The data condition Branch is EEE on the ACL limits it to EEE records; roles bb2, bb3 and bb4 are required by the Create, Write and Delete ACLs respectively.
