

Scalability & Future Plan

Date	1 October 2026
Team ID	SWTID-2026-3594
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	The READ ACL condition is fixed to the EEE branch	Other branches need their own ACLs and roles	High
2	Roles bb1 - bb4 are short codes assigned to a single user	Harder to manage as more users are added	Medium
3	Records are entered manually and there is no audit report	Limited traceability of who changed what	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Roles assigned to one test user	Assign roles to groups so many users inherit access
2	Data Storage	One custom table with sample records	Import records in bulk with import sets
3	Performance	Lightweight role-check script	Keep scripts query-free and test with larger lists
4	Security	Read, create, write, delete ACLs	Add field-level ACLs for email and phone number

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Make the ACL branch-aware using the user's own branch instead of a fixed EEE value	1 - 2 months	One ACL serves every branch
Phase 3	Rename roles descriptively and manage them through groups	2 - 3 months	Easier role management
Phase 4	Add audit reporting dashboards and a Service Portal view	3 - 4 months	Better traceability and user experience
